PROBLEM IDENTIFICATION

➔ Customer Faced Problem

In the current restaurant ordering system, customers occasionally face situations where their online orders are not properly confirmed in the system despite successful payment. This results in the customer not receiving an order confirmation notification or receipt, leading to uncertainty about the order status. As a result, food is not prepared or delivered on time, causing customer frustration, potential financial disputes, and loss of trust in the restaurant's service.

➔ Family Recipes

The restaurant's current ordering and payment system occasionally records payment from the customer without registering the corresponding order in the kitchen dashboard. This misconfirmation issue prevents staff from receiving the order details, resulting in no food preparation despite payment being processed. Such discrepancies cause operational confusion, manual reconciliation efforts, delayed service, and negative customer experiences, ultimately impacting the restaurant's reputation and revenue.

User Problem Definition

Most restaurant apps provide only basic ordering and tracking, but users experience:

- Cluttered interfaces and confusing navigation.
- Multi-page checkouts that lead to order abandonment.
- Poorly presented food visuals and inconsistent branding.
- No real-time tracking or feedback after placing an order.

Research Methods Used

- User interviews with diners, restaurant owners, and delivery partners.
- Competitor analysis of apps like Swiggy and Zomato.
- Online surveys to understand frustration points during checkout.
- Observation of real restaurant workflows.

INSIGHTS & PERSONA CREATION

➔ Data Analysis & Insights

- Users want a premium, visually appealing interface that reflects food quality.
- Real-time order tracking with countdown timers reduces post-order anxiety.
- Restaurant staff need instant feedback animations for efficiency.
- Bottom switching Keys they have asked to navigate it easily

User Persona

➔ Needs

- Accurate pickup location and order details.
- Real-time update when the food is ready for delivery.
- Quick confirmation system to avoid waiting at the restaurant.
- Simple route navigation with minimal app switching.

➔ Goals

- Deliver orders faster without confusion or double trips.
- Maintain high customer ratings and earn timely incentives.
- Reduce idle time between deliveries.

➔ Frustrations

- Arriving before the order is actually prepared due to system delays.
- Wrong or missing order IDs in the delivery app.
- Waiting too long at the restaurant because of miscommunication.
- Losing delivery priority or ratings due to late deliveries.

User Persona

➔ Needs

- Clear status updates when orders are confirmed or delayed.
- Easy access to customer contact info for smooth handover.
- A synchronized system between restaurant and delivery partner apps.
- Reliable notifications when new delivery requests appear.

➔ Goals

- To complete deliveries efficiently with minimal waiting time.
- To receive accurate delivery instructions and avoid confusion.
- To ensure customer satisfaction and earn delivery bonuses.

➔ Frustrations

- Sudden order cancellations after pickup confirmation.
- No notification when the restaurant marks an order as ready.
- Confusion caused by payment-registered but order-not-received cases.
- Loss of time and earnings due to backend technical issues.

Interaction_Voice

User Persona

➔ Needs

- A stable and unified system linking payment, order, and kitchen dashboards.
- Instant alerts for every new confirmed order.
- Simple tools to update menu, availability, and order status.
- Ability to monitor delivery timings and performance.

➔ Goals

- Eliminate the payment-confirmation mismatch problem.
- Streamline coordination with delivery partners.
- Improve service reliability and build customer trust.
- Increase overall efficiency and reduce manual corrections.

➔ Frustrations

- Orders paid for but not visible in the kitchen system.
- Frequent customer complaints about missing or delayed orders.
- Staff confusion during peak hours due to unsynced data.
- Reputational and revenue loss from technical failures.

Empathy Map

EMPATHY MAP

JOURNEY MAP & WIREFRAMES

Customer Journey Map

Journey Stage	Past / Present Pain Point	Future Experience (With "Bites Up" App)
1. Browsing & Discovery	An unappealing or inconsistent visual design makes the food and brand seem unprofessional.	The user experiences a premium, modern aesthetic with a high-contrast dark theme that enhances high-quality food photography ¹ .
2. Ordering & Checkout	A long, multi-page checkout process creates friction and leads to users abandoning their carts ² .	The checkout is a streamlined, single, clear screen ³ , and adding items is confirmed with a satisfying animation of the item flying to the cart icon ⁴ .
3. Post-Order & Waiting	Uncertainty and anxiety after placing an order due to a lack of status updates.	The user gets clear, real-time feedback from a live order tracking screen featuring an animated countdown timer ⁵ .
4. Order Confirmation	A simple, transactional confirmation screen that is unmemorable and anticlimactic.	The confirmation is transformed into a "moment of delight" ⁶ with a checkmark that appears in a "celebratory confetti burst" for positive reinforcement ⁷ .

Low Fidelity Wireframes & Layout

UI Kit(color palette ,components)

Software We used: Figma

→ Color Palette:

- Primary Blue (#3A5EFF)
- Success Green (#37D67A)
- Alert Red (#FF3B30)
- Background – Dark Gray (#121212), White for contrast

→ Components:

- Rounded cards, gradient buttons, toggle switches, clean sans-serif typography (Inter / Roboto).
- **Plugins**
 - Icons8
 - Iconify
 - IconScout
- **Pictures:**
 - Istock
 - Adode Firefly
 - Freepik
 - Youtube (Login BG video)

High-Fidelity wireframes

INTERACTION & ANIMATION

→ Basic UI Animation

- Button State Change: while clicking the menu option it show the name of the icon so that u confirm that “you are in the home page”
- Seamless Transitions: Smooth slide-ins between home → Food → add to cart → place order → payment → Done.
- Payment Confirmation Popup
- Navigation Bar Animation: bottom to top animation
- Login Screen BG Video

Micro Interaction

- Search bar taps its zooms in it
- Profile button popping it from the bottom
- Veg Mode On/OFF Animation
- Live Countdown: Delivery timer dynamically updates every second.
